

ABSTRACT

A image recognition device using pattern elements is disclosed. The device comprises an image recognition device, a recording medium, and an image processing device which is be capable of executing recognition processing accurately and evaluating an input image even when the input image data is a different size because the input image has been magnified or reduced. To achieve the objectives, the image recognition device of this invention has a pattern element recognizing means to recognize the pattern elements obtained by dividing the input image into a plurality of regions which are compared with corresponding target pattern elements, and a pattern detection means to detect the relative position of the pattern elements, which determines whether the pattern elements detected by the pattern element recognizing means are arranged properly with respect to each other.
